THE PATTERN 1908 WEB INFANTRY EQUIPMENT.

PLATE I.

Description of the Equipment.

All the buckles used in the equipment are of the rectangular or "U-shaped" variety. They are made in a manner to ensure the buckle being in an upright position. The length of the belt is determined by the length of the belt being in an upright position. The buckle is made in a manner to ensure that the buckle will be kept in an upright position.

To Assemble the Equipment.

As has been previously stated the design of the equipment consists of the following:

1. Belts.
2. Buckles.
3. Cartridge cases.
4. Holsters.
5. Haversacks.

To carry the haversack and cartridge case separately from the rest of the equipment.

There are four main parts of the bolt: the bolt head, the bolt shank, the bolt body, and the bolt screw. Each part is made to fit the other and to be used for the purpose of attaching the bolt to the bolt head. The bolt head is made to fit the bolt body and to be used for the purpose of securing the bolt to the bolt shank. The bolt shank is made to fit the bolt body and to be used for the purpose of securing the bolt to the bolt screw. The bolt body is made to fit the bolt screw and to be used for the purpose of securing the bolt to the bolt head.

Care and Preservation.

When the equipment has once been properly cleaned, it should be kept in a cool, dry place. The equipment should be stored in a cool, dry place. The equipment should be kept in a cool, dry place. The equipment should be kept in a cool, dry place. The equipment should be kept in a cool, dry place.
